

Project File Guide

Complete repository structure and execution reference.

README.md

Project overview, business questions, data description, reproducible workflow, metrics, and repository structure.

data/advertising_campaigns.csv

Fixed source dataset containing 1,200 campaign observations.

R/01_validate_and_clean.R

Checks the schema and values, calculates derived metrics, and writes the cleaned dataset.

R/02_eda.R

Creates platform and monthly summaries and regenerates analysis charts.

R/03_predictive_model.R

Fits and evaluates the revenue prediction model and writes performance metrics.

R/04_key_insights.R

Ranks platforms by ROAS and creates a concise insight table.

run_all.R

Single entry point that executes the full analysis in order.

outputs/

Stores generated CSV summaries, model metrics, model summary, and plots.

docs/Advertising_Campaign_Performance_Report.pdf

Professional final report with methodology, results, interpretation, and limitations.

docs/Advertising_Campaign_Performance_Report.docx

Editable report version suitable for document-based submission.

LICENSE

MIT license included at repository root.

Execution

Open the repository in R/RStudio, set the working directory to the project root, and run `run_all.R`. The script stops on missing required fields or invalid numeric values and then regenerates the outputs.
